**MODE 3: Table**

**[MODE] [3:TABLE]**

**A. Intersection of Graphs**

1. Find the points of intersection of the straight line  $f(x) = x - 3$  and the parabola  $g(x) = x^2 - x - 6$  when  $x \in [-3;4]$

<b>Key Sequence:</b>	<b>On screen:</b>																																				
<ul style="list-style-type: none"> <li>• Input <math>f(x)</math> formula [=] <b>to input the variable x:</b> [ALPHA] [X]</li> <li>• Input <math>g(x)</math> formula [=]</li> <li>• Set boundaries for the table: <i>Start?</i> [-3] [=] <i>End?</i> [4] [=] <i>Steps?</i> [1] [=]</li> </ul>	<ul style="list-style-type: none"> <li>• <math>f(X) = X - 3</math></li> <li>• <math>g(X) = X^2 - X - 6</math></li> </ul>																																				
<p><b>Point of Intersection (-1 ; -4)</b> →</p>	<table border="1" style="margin-left: auto; margin-right: auto; border-collapse: collapse; text-align: center;"> <thead> <tr> <th style="width: 5%;"></th> <th style="width: 10%;">x</th> <th style="width: 10%;">f(x)</th> <th style="width: 10%;">g(x)</th> </tr> </thead> <tbody> <tr><td>1</td><td>-3</td><td>-6</td><td>6</td></tr> <tr><td>2</td><td>-2</td><td>-5</td><td>0</td></tr> <tr style="background-color: #cccccc;"><td>3</td><td>-1</td><td>-4</td><td>-4</td></tr> <tr><td>4</td><td>0</td><td>-3</td><td>-6</td></tr> <tr><td>5</td><td>1</td><td>-2</td><td>-6</td></tr> <tr><td>6</td><td>2</td><td>-1</td><td>-4</td></tr> <tr style="background-color: #cccccc;"><td>7</td><td>3</td><td>0</td><td>0</td></tr> <tr><td>8</td><td>4</td><td>1</td><td>6</td></tr> </tbody> </table>		x	f(x)	g(x)	1	-3	-6	6	2	-2	-5	0	3	-1	-4	-4	4	0	-3	-6	5	1	-2	-6	6	2	-1	-4	7	3	0	0	8	4	1	6
	x	f(x)	g(x)

2	-2	-5	0																																		
3	-1	-4	-4																																		
4	0	-3	-6																																		
5	1	-2	-6																																		
6	2	-1	-4																																		
7	3	0	0																																		
8	4	1	6																																		
<p><b>Point of Intersection (3 ; 0)</b> →</p>	This row is covered by the table above																																				

2. Find the point(s) of intersections of the graphs  $y = x^2 - 3x - 4$  and  $y = -x + 1\frac{1}{4}$
- This question differs from the previous one because it is not giving us an interval to work with; we hence have to choose our own one. An easy domain to start with is  $[-5; 5]$ .
  - The question also differs from the previous one because we do not find an intersection immediately.

<p><b>Key Sequence:</b></p> <ul style="list-style-type: none"> <li>• Input <math>f(x)</math> formula [=]</li> <li>• Input <math>g(x)</math> formula [=]</li> <li>• Set boundaries for the table:  <i>Start?</i> [-5] [=]  <i>End?</i> [5] [=]  <i>Steps?</i> [1] [=]</li> </ul> <p><b>Note:</b></p> <ul style="list-style-type: none"> <li>• <math>-5 \leq x \leq -2: f(x) &lt; g(x)</math></li> <li>• <math>-1 \leq x \leq 3: f(x) &gt; g(x)</math></li> <li>• <math>4 \leq x \leq 5: f(x) &lt; g(x)</math></li> </ul> <p><b>Hence:</b></p> <ul style="list-style-type: none"> <li>• One Point of Intersection should be <math>-2 &lt; x &lt; -1</math></li> <li>• Second point of intersection should be <math>3 &lt; x &lt; 4</math></li> </ul>	<p><b>On screen:</b></p> <ul style="list-style-type: none"> <li>• <math>f(X) = -X + 1\frac{1}{4}</math></li> <li>• <math>g(X) = X^2 - 3X - 4</math></li> </ul> <table border="1"> <thead> <tr> <th></th> <th>X</th> <th>f(x)</th> <th>g(x)</th> </tr> </thead> <tbody> <tr><td></td><td>1</td><td>-5</td><td>6.25</td></tr> <tr><td></td><td>2</td><td>-4</td><td>5.25</td></tr> <tr><td></td><td>3</td><td>-3</td><td>4.25</td></tr> <tr><td></td><td>4</td><td>-2</td><td>3.25</td></tr> <tr><td></td><td>5</td><td>-1</td><td>2.25</td></tr> <tr><td></td><td>6</td><td>0</td><td>1.25</td></tr> <tr><td></td><td>7</td><td>1</td><td>0.25</td></tr> <tr><td></td><td>8</td><td>2</td><td>-0.75</td></tr> <tr><td></td><td>9</td><td>3</td><td>-1.75</td></tr> <tr><td></td><td>10</td><td>4</td><td>-2.75</td></tr> <tr><td></td><td>11</td><td>5</td><td>-3.75</td></tr> <tr><td></td><td></td><td></td><td>6</td></tr> </tbody> </table>		X	f(x)	g(x)		1	-5	6.25		2	-4	5.25		3	-3	4.25		4	-2	3.25		5	-1	2.25		6	0	1.25		7	1	0.25		8	2	-0.75		9	3	-1.75		10	4	-2.75		11	5	-3.75				6

	11	5	-3.75																																																		
			6																																																		

- We are going to repeat the process but first focus on the domain  $-2 \leq x \leq -1$ .
- Afterwards we will repeat the process for the domain  $3 \leq x \leq 4$ .

Key Sequence for the next example is actually

[AC] (brings you to  $f(x)$ )

[=] (brings you to  $g(x)$ )

[=] (brings you to [start?])

So you don't have to enter the equations again.

You just have to press [AC]; [=]; [=] and you are at start

<p><b>Key Sequence:</b></p> <ul style="list-style-type: none"> <li>• Set boundaries for the table:  <i>Start?</i> [-2] [=]  <i>End?</i> [-1] [=]  <i>Steps?</i> [0.25] [=]</li> </ul> <p><b>Point of Intersection (-1,5 ; 2,75)</b></p>	<p><b>On screen:</b></p> <ul style="list-style-type: none"> <li>• <math>f(X) = -X + 1\frac{1}{4}</math></li> <li>• <math>g(X) = X^2 - 3X - 4</math></li> </ul> <table border="1"> <thead> <tr> <th></th> <th>X</th> <th>f(x)</th> <th>g(x)</th> </tr> </thead> <tbody> <tr><td></td><td>1</td><td>-2</td><td>3.25</td></tr> <tr><td></td><td>2</td><td>-1.75</td><td>3</td></tr> <tr style="background-color: #e0e0e0;"><td></td><td>3</td><td>-1.5</td><td>2.75</td></tr> <tr><td></td><td>4</td><td>-1.25</td><td>2.5</td></tr> <tr><td></td><td>5</td><td>-1</td><td>2.25</td></tr> <tr><td></td><td></td><td></td><td>0</td></tr> </tbody> </table>		X	f(x)	g(x)		1	-2	3.25		2	-1.75	3		3	-1.5	2.75		4	-1.25	2.5		5	-1	2.25				0

	1	-2	3.25																										
	2	-1.75	3																										
	3	-1.5	2.75																										
	4	-1.25	2.5																										
	5	-1	2.25																										
			0																										

Next domain:

<p><b>Key Sequence:</b></p> <ul style="list-style-type: none"> <li>• [AC] [=] [=]</li> <li>• Set boundaries for the table:  <i>Start?</i> [3] [=]  <i>End?</i> [4] [=]  <i>Steps?</i> [0.25] [=]</li> </ul> <p><b>Point of Intersection (3,5; -2,25)</b></p>	<p><b>On screen:</b></p> <ul style="list-style-type: none"> <li>• <math>f(X) = -X + 1\frac{1}{4}</math></li> <li>• <math>g(X) = X^2 - 3X - 4</math></li> </ul> <table border="1"> <thead> <tr> <th></th> <th>X</th> <th>f(x)</th> <th>g(x)</th> </tr> </thead> <tbody> <tr> <td>1</td> <td>3</td> <td>-1.75</td> <td>-4</td> </tr> <tr> <td>2</td> <td>3.25</td> <td>-2</td> <td>-3.1875</td> </tr> <tr style="background-color: #e0e0e0;"> <td>3</td> <td>3.5</td> <td>-2.25</td> <td>-2.25</td> </tr> <tr> <td>4</td> <td>3.75</td> <td>-2.5</td> <td>-1.1875</td> </tr> <tr> <td>5</td> <td>4</td> <td>-2.75</td> <td>0</td> </tr> </tbody> </table>		X	f(x)	g(x)	1	3	-1.75	-4	2	3.25	-2	-3.1875	3	3.5	-2.25	-2.25	4	3.75	-2.5	-1.1875	5	4	-2.75	0
	X	f(x)	g(x)																						
1	3	-1.75	-4																						
2	3.25	-2	-3.1875																						
3	3.5	-2.25	-2.25																						
4	3.75	-2.5	-1.1875																						
5	4	-2.75	0																						

If we still did not find the point of intersection we can

- change the domain again – by making sure that we have the intervals where there is a change from  $f(x) < g(x)$  to  $f(x) > g(x)$  or vice versa.
- change the steps again

## B. Finding the turning point of a parabola

1. Find the turning point of  $f(x) = x^2 - 4x - 1$

- We are not sure about the range so will work with  $x \in [-5;5]$

<p><b>Key Sequence:</b></p> <ul style="list-style-type: none"> <li>• Input f(x) formula [=]</li> <li>• Input g(x) formula [=]</li> <li>• Set boundaries for the table:  <i>Start?</i> [-5] [=]  <i>End?</i> [5] [=]  <i>Steps?</i> [1] [=]</li> </ul> <p><b>Turning point of f(x) (2 ; -5)</b></p>	<p><b>On Screen:</b>  <math>f(X) = X^2 - 4X - 1</math></p> <table border="1"> <thead> <tr> <th></th> <th>x</th> <th>f(x)</th> <th>g(x)</th> </tr> </thead> <tbody> <tr><td>1</td><td>-5</td><td>44</td><td></td></tr> <tr><td>2</td><td>-4</td><td>31</td><td></td></tr> <tr><td>3</td><td>-3</td><td>20</td><td></td></tr> <tr><td>4</td><td>-2</td><td>11</td><td></td></tr> <tr><td>5</td><td>-1</td><td>4</td><td></td></tr> <tr><td>6</td><td>0</td><td>-1</td><td></td></tr> <tr><td>7</td><td>1</td><td>-4</td><td></td></tr> <tr><td>8</td><td>2</td><td>-5</td><td></td></tr> <tr><td>9</td><td>3</td><td>-4</td><td></td></tr> <tr><td>10</td><td>4</td><td>-1</td><td></td></tr> <tr><td>11</td><td>5</td><td>4</td><td></td></tr> </tbody> </table>		x	f(x)	g(x)	1	-5	44		2	-4	31		3	-3	20		4	-2	11		5	-1	4		6	0	-1		7	1	-4		8	2	-5		9	3	-4		10	4	-1		11	5	4	
	x	f(x)	g(x)																																														
1	-5	44																																															
2	-4	31																																															
3	-3	20																																															
4	-2	11																																															
5	-1	4																																															
6	0	-1																																															
7	1	-4																																															
8	2	-5																																															
9	3	-4																																															
10	4	-1																																															
11	5	4																																															

2. Find the turning point of  $f(x) = 4x^2 - 4x - 2$
- Start with domain  $x \in [-5;5]$ .

<p><b>Key Sequence:</b></p> <ul style="list-style-type: none"> <li>Input <math>f(x)</math> formula [=]</li> <li>Input <math>g(x)</math> formula [=]</li> <li>Set boundaries for the table:  <i>Start?</i> [-5] [=]  <i>End?</i> [5] [=]  <i>Steps?</i> [1] [=]</li> </ul> <p><b>Turning point should be in this interval</b></p>	<b>On Screen:</b> $f(X) = 4X^2 - 4X - 2$			
		$x$	$f(x)$	$g(x)$
		1	-5	118
		2	-4	78
		3	-3	46
		4	-2	22
		5	-1	6
		6	0	-2
		7	1	-2
		8	2	6
		9	3	22
		10	4	46
	11	5	78	

- We are going to repeat the process but first focus on the domain  $0 \leq x \leq 1$

<p><b>Key Sequence:</b></p> <ul style="list-style-type: none"> <li>[AC] [=] [=]</li> <li>Set boundaries for the table:  <i>Start?</i> [0] [=]  <i>End?</i> [1] [=]  <i>Steps?</i> [0.25] [=]</li> </ul> <p><b>Turning point (0,5; -3)</b></p>	<b>On Screen:</b> $f(X) = 4X^2 - 4X - 2$			
		$x$	$f(x)$	$g(x)$
		1	0	-2
		2	0.25	-2.75
		3	0.5	-3
		4	0.75	-2.75
	5	1	-2	

3. Find the turning point of  $f(x) = 2x^2 - 8,5x + 4$   
 Start with domain  $x \in [-5;5]$ .

<p><b>Key Sequence:</b></p> <ul style="list-style-type: none"> <li>• Input <math>f(x)</math> formula [=]</li> <li>• Input <math>g(x)</math> formula [=]</li> <li>• Set boundaries for the table:  <i>Start?</i> [-5] [=]  <i>End?</i> [5] [=]  <i>Steps?</i> [1] [=]</li> </ul> <p><b>Turning point should be in this interval</b></p>	<b>On Screen:</b> $f(X) = 2X^2 - 8.5X + 4$			
		$x$	$f(x)$	$g(x)$
	1	-5	96.5	
	2	-4	70	
	3	-3	47.5	
	4	-2	29	
	5	-1	14.5	
	6	0	4	
	7	1	-2.5	
	8	2	-5	
	9	3	-3.5	
10	4	2		
11	5	11.5		

- We are going to repeat the process but focus on the domain  $1 \leq x \leq 3$

<p><b>Key Sequence:</b></p> <ul style="list-style-type: none"> <li>• [AC] [=] [=]</li> <li>•</li> <li>• Set boundaries for the table:  <i>Start?</i> [1] [=]  <i>End?</i> [3] [=]  <i>Steps?</i> [0.25] [=]</li> </ul> <p><b>Turning point should be in this interval</b></p>	<b>On Screen:</b> $f(X) = 2X^2 - 8.5X + 4$			
		$x$	$f(x)$	$g(x)$
	1	1	-2.5	
	2	1.25	-3.5	
	3	1.5	-4.25	
	4	1.75	-4.75	
	5	2	-5	
	6	2.25	-5	
	7	2.5	-4.75	
	8	2.75	-4.25	
9	3	-3.5		

- So working with “steps” of 0,25 was not small enough.
- We are going to repeat the process but now focus on the domain  $2 \leq x \leq 2,25$  and change the “steps”

<p><b>Key Sequence:</b></p> <ul style="list-style-type: none"> <li>• [AC] [=] [=]</li> <li>• Set boundaries for the table:  <i>Start?</i> [2] [=]  <i>End?</i> [2.25] [=]  <i>Steps?</i> [0.0625] [=]</li> </ul> <p><b>Turning point (2,125; -5,03125)</b></p> <ul style="list-style-type: none"> <li>• Using S <math>\leftrightarrow</math> D key: <math>\left(\frac{35}{16}; -\frac{643}{128}\right)</math></li> <li>• Using <math>a\frac{b}{c} \leftrightarrow \frac{d}{c}</math> key: <math>\left(2\frac{3}{16}; -5\frac{3}{128}\right)</math></li> </ul>	<p><b>On Screen:</b>  <math>f(X) = 2X^2 - 8.5X + 4</math></p> <table border="1" style="margin-left: auto; margin-right: auto;"> <thead> <tr> <th></th> <th><math>x</math></th> <th><math>f(x)</math></th> <th><math>g(x)</math></th> </tr> </thead> <tbody> <tr> <td>1</td> <td>2</td> <td>-5</td> <td></td> </tr> <tr> <td>2</td> <td>2.0625</td> <td>-5.0234375</td> <td></td> </tr> <tr> <td>3</td> <td>2.125</td> <td>-5.03125</td> <td></td> </tr> <tr> <td>4</td> <td>2.1875</td> <td>-5.0234375</td> <td></td> </tr> <tr> <td>5</td> <td>2.25</td> <td>-5</td> <td></td> </tr> </tbody> </table>		$x$	$f(x)$	$g(x)$	1	2	-5		2	2.0625	-5.0234375		3	2.125	-5.03125		4	2.1875	-5.0234375		5	2.25	-5	
	$x$	$f(x)$	$g(x)$																						
1	2	-5																							
2	2.0625	-5.0234375																							
3	2.125	-5.03125																							
4	2.1875	-5.0234375																							
5	2.25	-5																							

- We are looking for symmetry in the  $f(x)$  value and then a minimum or maximum point.

**C. Finding Intercepts with the axes**

1. Find the intercepts with both the axes of the graph of  $f(x) = x^2 - 5x + 6$

<p><b>Key Sequence:</b></p> <ul style="list-style-type: none"> <li>• Input <math>f(x)</math> formula [=]</li> <li>• Input <math>g(x)</math> formula [=]</li> <li>• Set boundaries for the table:  <i>Start?</i> [-5] [=]  <i>End?</i> [5] [=]  <i>Steps?</i> [1] [=]</li> </ul> <p><b>y - intercept</b> <math>\rightarrow</math></p> <p><b>x - intercepts</b> <math>\rightarrow</math></p> <p>(0; 6) is the y - intercept  (2; 0) and (3; 0) are the x - intercepts</p>	<p><b>On Screen:</b>  <math>f(X) = X^2 - 5X + 6</math></p> <table border="1" style="margin-left: auto; margin-right: auto;"> <thead> <tr> <th></th> <th><math>x</math></th> <th><math>f(x)</math></th> <th><math>g(x)</math></th> </tr> </thead> <tbody> <tr> <td>1</td> <td>-5</td> <td>56</td> <td></td> </tr> <tr> <td>2</td> <td>-4</td> <td>42</td> <td></td> </tr> <tr> <td>3</td> <td>-3</td> <td>30</td> <td></td> </tr> <tr> <td>4</td> <td>-2</td> <td>20</td> <td></td> </tr> <tr> <td>5</td> <td>-1</td> <td>12</td> <td></td> </tr> <tr style="background-color: #cccccc;"> <td>6</td> <td>0</td> <td>6</td> <td></td> </tr> <tr> <td>7</td> <td>1</td> <td>2</td> <td></td> </tr> <tr style="background-color: #cccccc;"> <td>8</td> <td>2</td> <td>0</td> <td></td> </tr> <tr style="background-color: #cccccc;"> <td>9</td> <td>3</td> <td>0</td> <td></td> </tr> <tr> <td>10</td> <td>4</td> <td>2</td> <td></td> </tr> <tr> <td>11</td> <td>5</td> <td>6</td> <td></td> </tr> </tbody> </table>		$x$	$f(x)$	$g(x)$	1	-5	56		2	-4	42		3	-3	30		4	-2	20		5	-1	12		6	0	6		7	1	2		8	2	0		9	3	0		10	4	2		11	5	6	
	$x$	$f(x)$	$g(x)$																																														
1	-5	56																																															
2	-4	42																																															
3	-3	30																																															
4	-2	20																																															
5	-1	12																																															
6	0	6																																															
7	1	2																																															
8	2	0																																															
9	3	0																																															
10	4	2																																															
11	5	6																																															

2. Find the intercepts with both axes of  $f(x) = -x^2 + 3x - 3$

<p><b>Key Sequence:</b></p> <ul style="list-style-type: none"> <li>• Input <math>f(x)</math> formula [=]</li> <li>• Input <math>g(x)</math> formula [=]</li> <li>• Set boundaries for the table:  <i>Start?</i> [-5] [=]  <i>End?</i> [5] [=]  <i>Steps?</i> [1] [=]</li> </ul> <p><b>y - intercept</b>  <b>x - intercepts</b></p> <p>(0; -3) is the y - intercept          There are no x - intercepts and the turning point will be between <math>1 &lt; x &lt; 2</math>.          Just to make sure you can work in the domain <math>1 &lt; x &lt; 2</math> in steps of 0.25.          We will find that the turning point is at (1,5; -0,75) and <math>0,75 &lt; 0</math> - hence no x - intercepts.</p>	<p><b>On Screen:</b>  <math>f(X) = -X^2 + 3X - 3</math></p> <table border="1" style="width: 100%; border-collapse: collapse; text-align: center;"> <thead> <tr> <th style="width: 10%;"></th> <th style="width: 10%;">x</th> <th style="width: 15%;">f(x)</th> <th style="width: 15%;">g(x)</th> </tr> </thead> <tbody> <tr><td>1</td><td>-5</td><td>-43</td><td></td></tr> <tr><td>2</td><td>-4</td><td>-31</td><td></td></tr> <tr><td>3</td><td>-3</td><td>-21</td><td></td></tr> <tr><td>4</td><td>-2</td><td>-13</td><td></td></tr> <tr><td>5</td><td>-1</td><td>-7</td><td></td></tr> <tr style="background-color: #e0e0e0;"><td>6</td><td>0</td><td>-3</td><td></td></tr> <tr><td>7</td><td>1</td><td>-1</td><td></td></tr> <tr style="background-color: #e0e0e0;"><td>8</td><td>2</td><td>-1</td><td></td></tr> <tr><td>9</td><td>3</td><td>-3</td><td></td></tr> <tr><td>10</td><td>4</td><td>-7</td><td></td></tr> <tr><td>11</td><td>5</td><td>-13</td><td></td></tr> </tbody> </table>		x	f(x)	g(x)	1	-5	-43		2	-4	-31		3	-3	-21		4	-2	-13		5	-1	-7		6	0	-3		7	1	-1		8	2	-1		9	3	-3		10	4	-7		11	5	-13	
	x	f(x)	g(x)																																														
1	-5	-43																																															
2	-4	-31																																															
3	-3	-21																																															
4	-2	-13

## MODE 2: Statistics

### [MODE] [2:STAT]

#### Stats Menu:

Key	Menu Item	Explanation
1.	1-VAR	Single variable / Data handling
2.	A + BX	Linear regression
3.	$\_ + CX^2$	Quadratic regression
4.	ln X	Logarithmic regression
5.	$e ^ X$	Exponential regression
6.	$A . B ^ X$	AB exponential regression
7.	$A . X ^ B$	Power regression
8.	1/X	Inverse regression

#### E. Finding the equations of functions

- Find the equation of the straight line through (-1; -1) and (2; 5)
  - Remember in STATS the Linear function is given as  $(y=A+Bx)$

Solution:	Key Sequence:									
Set your calculator to Stats mode – Linear Regression	[MODE] [2:STAT] [2] (A+BX)									
Enter the data into the double variable table Input $x$ -values first and then $y$ -values.	<table border="1"> <thead> <tr> <th></th> <th><math>x</math></th> <th><math>y</math></th> </tr> </thead> <tbody> <tr> <td>1</td> <td>-1 [=]</td> <td>-1 [=]</td> </tr> <tr> <td>2</td> <td>2 [=]</td> <td>5 [=]</td> </tr> </tbody> </table>		$x$	$y$	1	-1 [=]	-1 [=]	2	2 [=]	5 [=]
	$x$	$y$								
1	-1 [=]	-1 [=]								
2	2 [=]	5 [=]								
Use the [REPLAY] arrows to move the cursor to the $y$ -column.										
Clear the screen - ready for the stats sub menu	[AC] [SHIFT] [1] (STAT)									

Key	Menu Item	Explanation
5: Reg	1. A	Regression co-efficient of A
	2. B	Regression co-efficient of B
	3. r	Correlation co-efficient r
	4. $\hat{x}$	Estimated value of $x$
	5. $\hat{y}$	Estimated value of $y$

- Calculate the value of A.
- Press: [SHIFT] [1] [5: Reg] [1: A] [=]
- A = 1
- Now calculate the value of B
- Press: [SHIFT] [1] [5: Reg] [2: B] [=]
- B = 2
- So the equation is  $y = 1 + 2x$  or in the familiar notation:  $y = 2x + 1$

2. Find the Quadratic function with  $x$  intercepts  $(-1; 0)$  and  $(4, 0)$  and  $y$  intercept  $(0; 8)$
- Remember in STATS the Quadratic function is given as  $(y=A+Bx+Cx^2)$

<b>Solution:</b>	<b>Key Sequence:</b>			
Set your calculator to Stats mode – Quadratic Regression	[MODE] [2:STAT] [3] ( $\_ + CX^2$ )			
Enter the data into the double variable table Input $x$ -values first and then $y$ -values.		<b><math>x</math></b>	<b><math>y</math></b>	
	1	-1 [=]	0 [=]	
	2	4 [=]	0 [=]	
	3	0 [=]	8 [=]	
Use the [REPLAY] arrows to move the cursor to the $y$ -column.				
Clear the screen - ready for the stats sub menu	[AC] [SHIFT] [1] (STAT)			

<b>Key</b>	<b>Menu Item</b>	<b>Explanation</b>
5: Reg	1. A	Regression co-efficient of A
	2. B	Regression co-efficient of B
	3. C	Regression co-efficient of C
	4. $\hat{x}_1$	Estimated value of $x_1$
	5. $\hat{x}_2$	Estimated value of $x_2$
	6. $\hat{y}$	Estimated value of $y$

- Calculate the value of A
- Press: [SHIFT] [1] [5: Reg] [1: A] [=]
- Then  $A = 8$
- Now calculate the value of B
- Press: [SHIFT] [1] [5: Reg] [2: B] [=]
- Then  $B = 6$
- Now calculate the value of C
- Press: [SHIFT] [1] [5: Reg] [3: C] [=]
- Then  $C = -2$
- Hence the equation is  $y = 8 + 6x - 2x^2$  or in the familiar format:  $y = -2x^2 + 6x + 8$ .

3. Find the Quadratic function passing through points  $(1; 2)$ ,  $(-1; -2)$  and  $(2; 7)$ .

<b>Solution:</b>	<b>Key Sequence:</b>			
Set your calculator to Stats mode – Quadratic Regression	[MODE] [2:STAT] [3] ( $\_ + CX^2$ )			
Enter the data into the double variable table Input $x$ -values first and then $y$ -values.		<b><math>x</math></b>	<b><math>y</math></b>	
	1	-1 [=]	-2[=]	
	2	1[=]	2 [=]	
	3	2 [=]	7 [=]	
Use the [REPLAY] arrows to move the cursor to the $y$ -column.				
Clear the screen - ready for the stats sub menu	[AC] [SHIFT] [1] (STAT)			

Key	Menu Item	Explanation
5: Reg	1. A	Regression co-efficient of A
	2. B	Regression co-efficient of B
	3. C	Regression co-efficient of C
	4. $\hat{x}_1$	Estimated value of $x_1$
	5. $\hat{x}_2$	Estimated value of $x_2$
	6. $\hat{y}$	Estimated value of $y$

- Calculate the value of A
- Press: [SHIFT] [1] [5: Reg] [1: A] [=]
- Then  $A = -1$
- Now calculate the value of B
- Press: [SHIFT] [1] [5: Reg] [2: B] [=]
- Then  $B = 2$
- Now calculate the value of C
- Press: [SHIFT] [1] [5: Reg] [3: C] [=]
- Then  $C = 1$
- Hence the equation is  $y = -1 + 2x + x^2$  or in the familiar format:  $y = x^2 + 2x - 1$ .

4. Find the equation of the exponential graph\* passing through the points (0; 1) and (2; 4).

\* The CASIO fx-ZA82 will only find equations of graphs of the form  $y = A.B^x$

Solution:	Key Sequence:									
Set your calculator to Stats mode – Exponential Regression	[MODE] [2:STAT] [6] (A.B <sup>x</sup> )									
Enter the data into the double variable table Input $x$ -values first and then $y$ -values.	<table border="1" style="margin-left: auto; margin-right: auto;"> <thead> <tr> <th></th> <th><math>x</math></th> <th><math>y</math></th> </tr> </thead> <tbody> <tr> <td>1</td> <td>0 [=]</td> <td>1 [=]</td> </tr> <tr> <td>2</td> <td>2 [=]</td> <td>4 [=]</td> </tr> </tbody> </table>		$x$	$y$	1	0 [=]	1 [=]	2	2 [=]	4 [=]
	$x$	$y$								
1	0 [=]	1 [=]								
2	2 [=]	4 [=]								
Use the [REPLAY] arrows to move the cursor to the $y$ -column.										
Clear the screen - ready for the stats sub menu	[AC] [SHIFT] [1] (STAT)									

Key	Menu Item	Explanation
5: Reg	1. A	Regression co-efficient of A
	2. B	Regression co-efficient of B
	3. r	Correlation coefficient
	4. $\hat{x}$	Estimated value of $x$
	5. $\hat{y}$	Estimated value of $y$

- Calculate the value of A
- Press: [SHIFT] [1] [5: Reg] [1: A] [=]
- Then  $A = 1$
- Now calculate the value of B
- Press: [SHIFT] [1] [5: Reg] [2: B] [=]

- Then  $B = 2$
  - Hence the equation is  $y = 1.2^x$  or  $y = 2^x$
5. Find the Quadratic function with turning point  $(-1; 4)$  and through point  $(0; 5)$ .
- We need to identify a third point on the graph. From the turning point we know that the axis of symmetry is  $x = -1$ . The point symmetrical to  $(0; 5)$  would then be  $(-2; 5)$ .

<b>Solution:</b>	<b>Key Sequence:</b>			
Set your calculator to Stats mode – Quadratic Regression	[MODE] [2:STAT] [3] ( $\_ + CX^2$ )			
Enter the data into the double variable table Input $x$ -values first and then $y$ -values.		<b>x</b>	<b>y</b>	
Use the [REPLAY] arrows to move the cursor to the $y$ -column.	1	-1 [=]	4[=]	
	2	-2[=]	5 [=]	
	3	0 [=]	5 [=]	
Clear the screen - ready for the stats sub menu	[AC] [SHIFT] [1] (STAT)			

<b>Key</b>	<b>Menu Item</b>	<b>Explanation</b>
5: Reg	1. A	Regression co-efficient of A
	2. B	Regression co-efficient of B
	3. C	Regression co-efficient of C
	4. $\hat{x}_1$	Estimated value of $x_1$
	5. $\hat{x}_2$	Estimated value of $x_2$
	6. $\hat{y}$	Estimated value of $y$

- Calculate the value of A
- Press: [SHIFT] [1] [5: Reg] [1: A] [=]
- Then  $A = 5$
- Now calculate the value of B
- Press: [SHIFT] [1] [5: Reg] [2: B] [=]
- Then  $B = 2$
- Now calculate the value of C
- Press: [SHIFT] [1] [5: Reg] [3: C] [=]
- Then  $C = 1$
- Hence the equation is  $y = 5 + 2x + x^2$  or in the familiar format:  $y = x^2 + 2x + 5$ .
